E-ZPass Interoperability

How It Works

Presentation By:

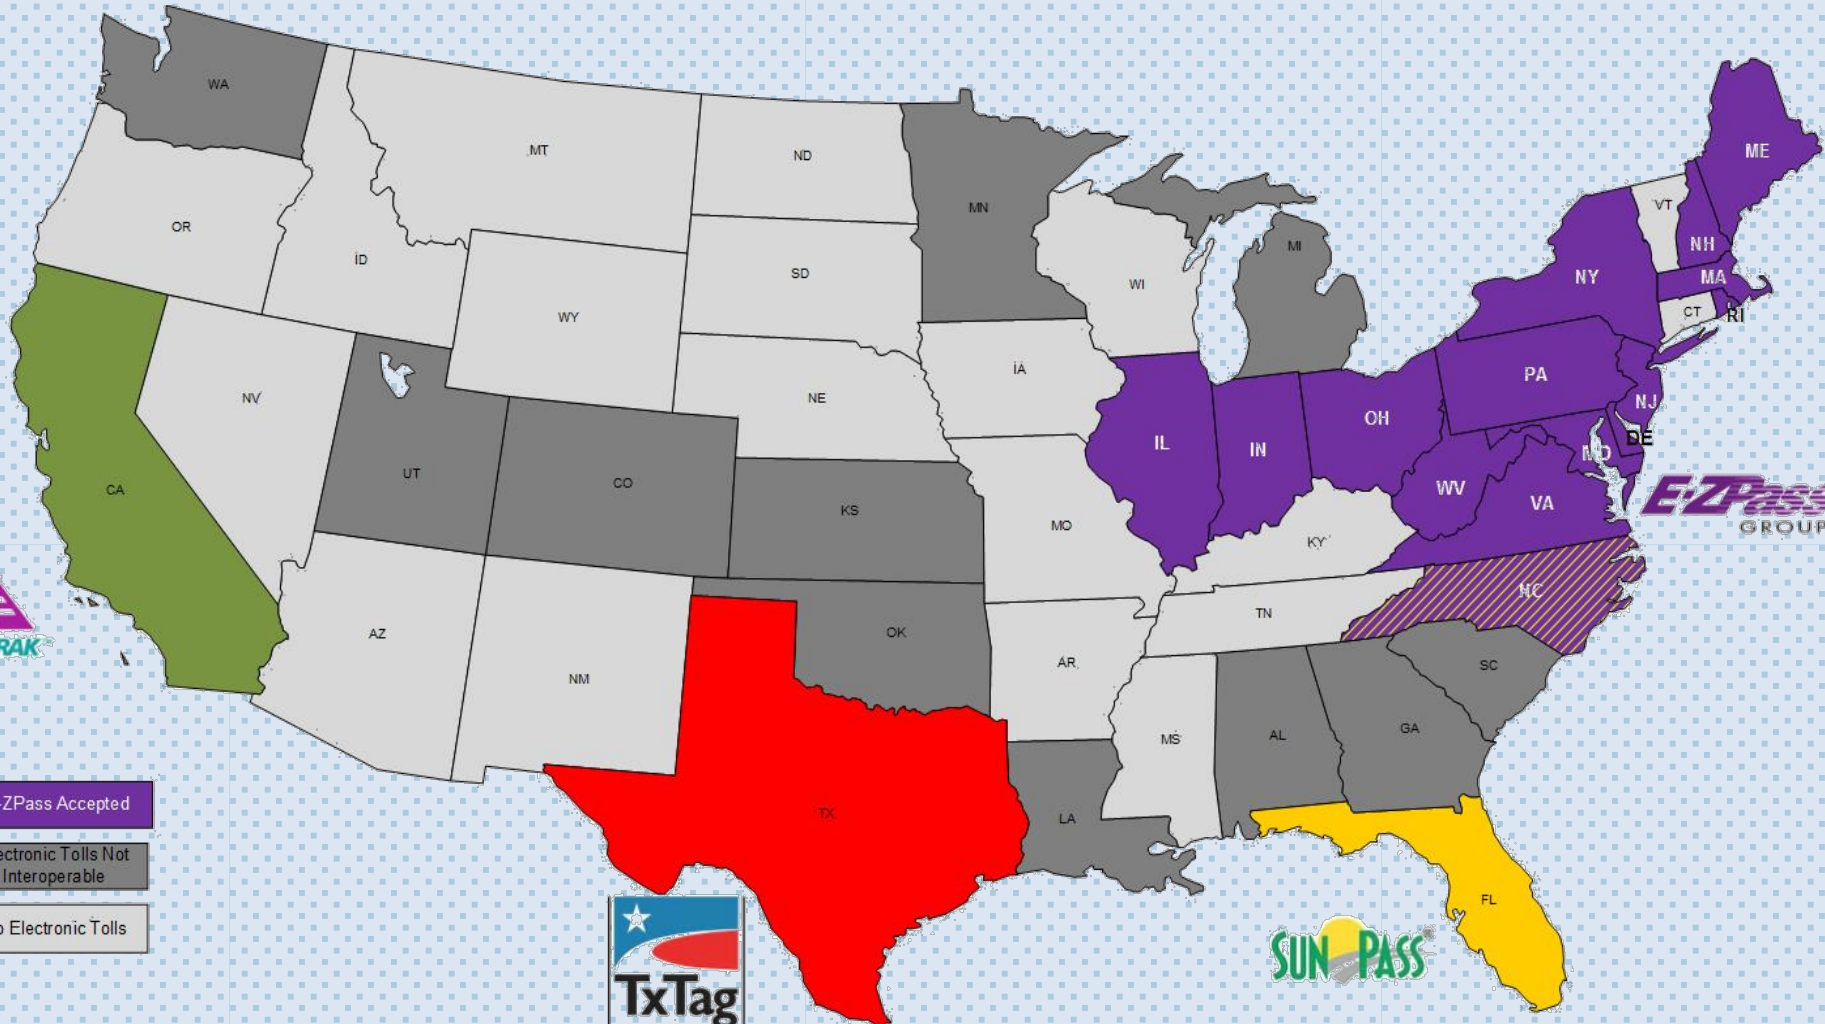

PJ Wilkins, Executive Director, E-ZPass Group

October 20, 2014

The logo for E-ZPass, featuring the text "E-ZPass" in a bold, italicized, sans-serif font. The "E" and "Z" are in a dark blue color, while "Pass" is in a lighter blue. A registered trademark symbol (®) is located to the right of the word "Pass".

E-ZPass[®]

Interoperability in the USA

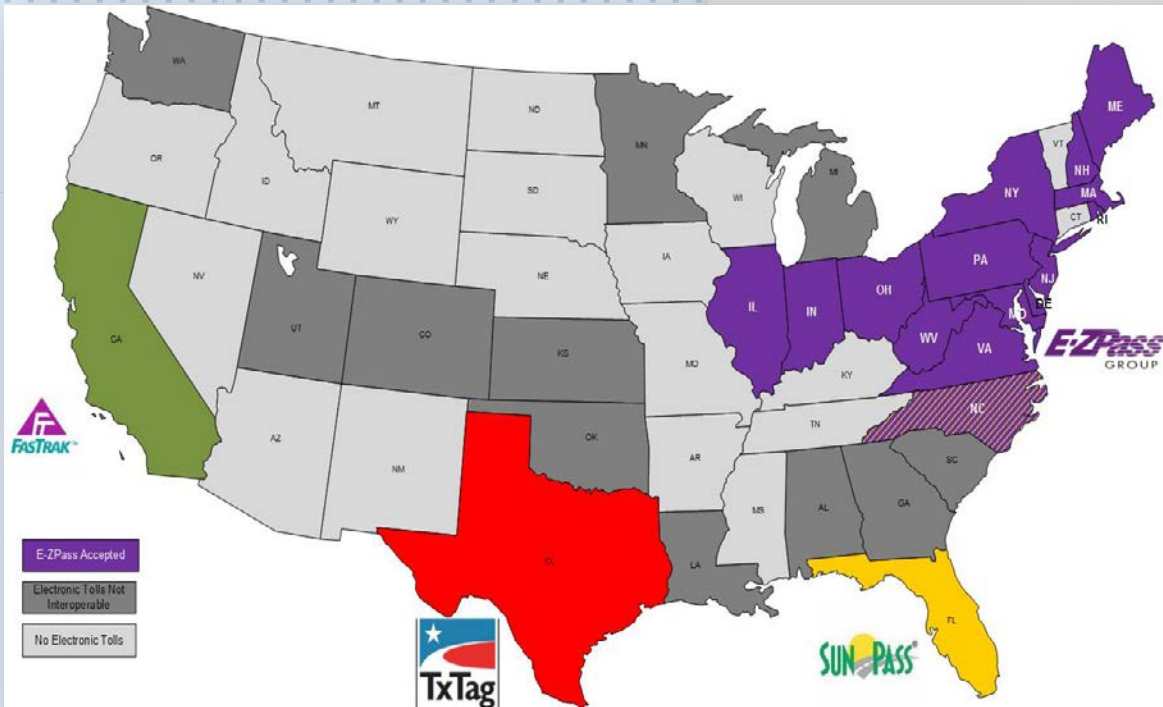

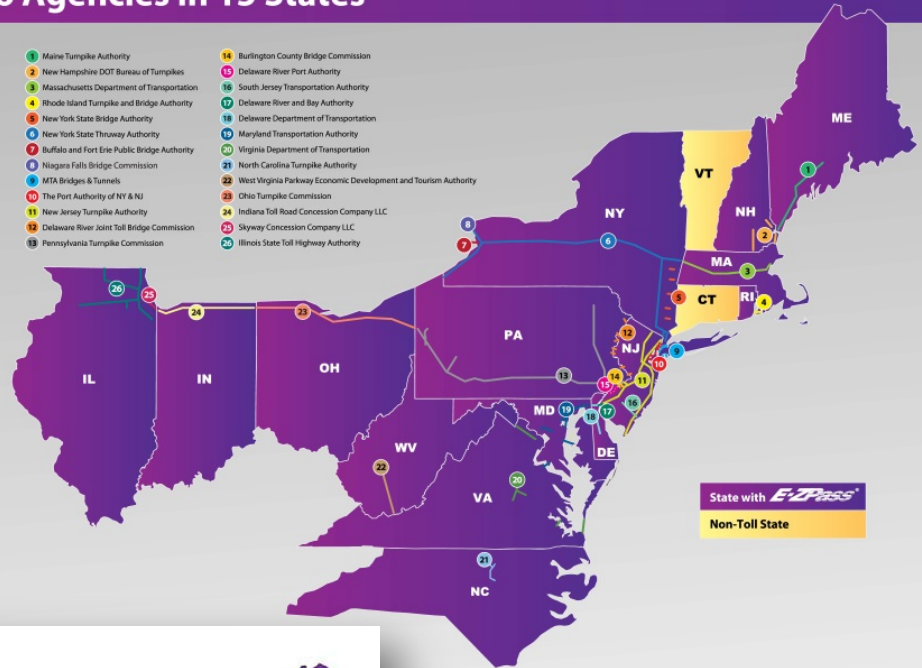

- E-ZPass Accepted
- Electronic Tolls Not Interoperable
- No Electronic Tolls

26 Agencies in 15 States

IOP TODAY IN USA

- 1 Maine Turnpike Authority
- 2 New Hampshire DOT Bureau of Turnpikes
- 3 Massachusetts Department of Transportation
- 4 Rhode Island Turnpike and Bridge Authority
- 5 New York State Bridge and Bridge Authority
- 6 New York State Thruway Authority
- 7 Buffalo and Fort Erie Public Bridge Authority
- 8 Niagara Falls Bridge Commission
- 9 MTA Bridges & Tunnels
- 10 The Port Authority of NY & NJ
- 11 New Jersey Turnpike Authority
- 12 Delaware River Joint Toll Bridge Commission
- 13 Pennsylvania Turnpike Commission
- 14 Burlington County Bridge Commission
- 15 Delaware River Port Authority
- 16 South Jersey Transportation Authority
- 17 Delaware River and Bay Authority
- 18 Delaware Department of Transportation
- 19 Maryland Department of Transportation
- 20 Virginia Department of Transportation
- 21 North Carolina Turnpike Authority
- 22 West Virginia Parkway Economic Development and Tourism Authority
- 23 Ohio Turnpike Commission
- 24 Indiana Toll Road Concession Company LLC
- 25 Skyway Concession Company LLC
- 26 Illinois State Toll Highway Authority

The E-ZPass Group

- Formed in 1990 by 7 toll agencies in 3 states
- Has developed into one of the most successful transportation related programs in the country
- Today consists of 26 toll agencies in 15 states, with more than 3600 toll lanes
- Yet is one of the most misunderstood organizations in the country
 - Is structured as a not for profit, unincorporated association

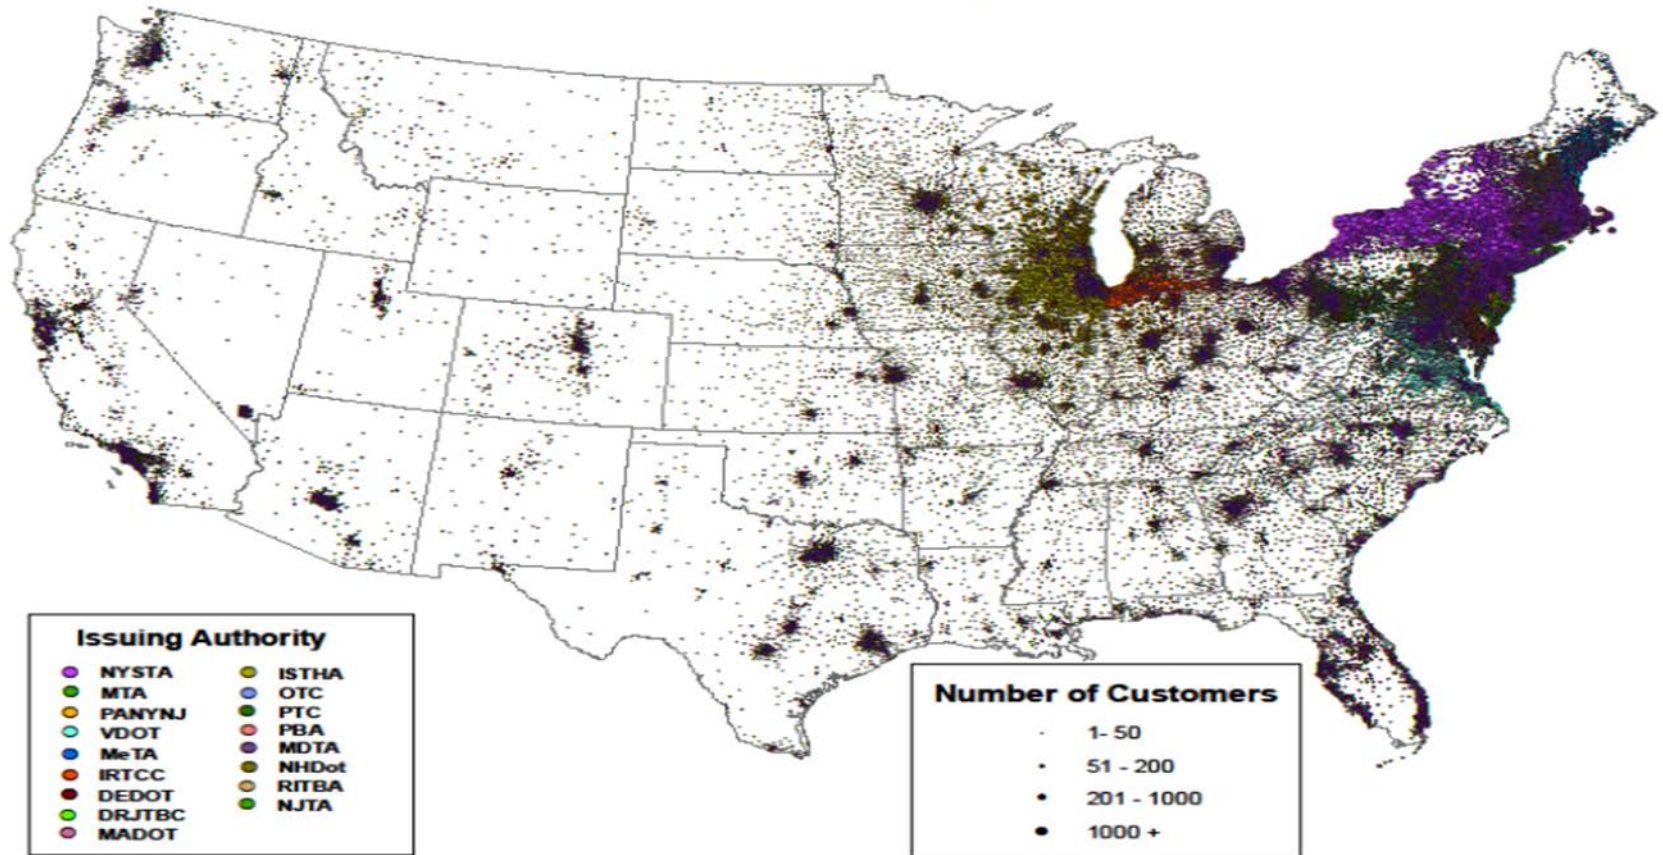

E-ZPass FUN FACTS & FIGURES

- Started IOP in 1993
- 26 Agencies, 15 States
- \$7.5 Billion Revenue
- \$3.5 Billion Exchanged

Success and Acceptance Brand Recognition

E-ZPass Customer Distribution by Issuing Authority

Why So Successful?

- One Tag – One Account
- Seamless Network
- Commercial Vehicle Operations

How It Works ---Key Elements

- Reciprocity Agreement with Toll Guarantee
 - If the tag is reported “valid”, then toll is guaranteed
- Common “Core” Business Rules
 - Limited number of rules we all agree to, but agencies remain independent in establishing their own rules when it makes sense to do so.
- Common File Specifications
 - All agencies send/receive data consistent with the filespec
- Rigorous Testing Protocol
 - Ensures high degree of confidence in our equipment
- Very High Performance Standards
 - Leads to customer satisfaction and confidence in revenue collection

What's Next?

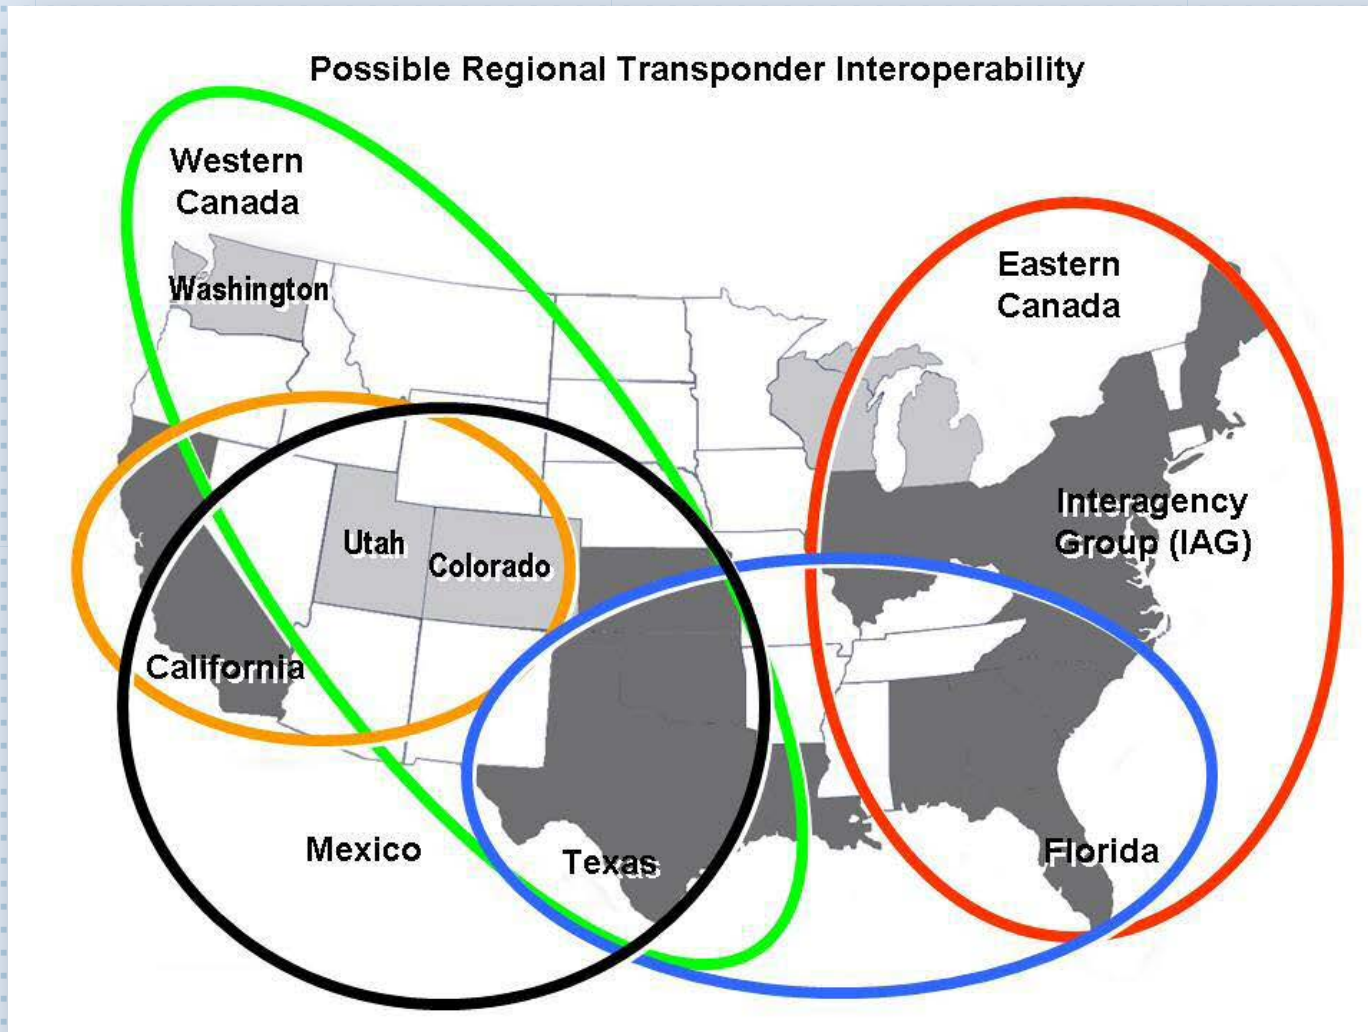

- National Interoperability
 - Congressional mandate for national interoperability in 2016
 - Unfunded mandate
 - Technical challenges
 - 7 existing protocols
 - Different user requirements/environments (read versus read/write, data mapping)
 - Business challenges
 - Toll Guarantee
 - Business rules
 - Governance
 - Cost of interoperability
 - Transaction charge for IOP, or just the “cost of doing business?”

If I had a crystal ball.....

- Will National Interoperability be achieved?
 - Yes, but not necessarily by 2016
 - Will happen through expansion of regional interoperability
 - Connection of those existing regions

Interconnected Regional Networks

Our Goal: National Interoperability

- One National ETC Protocol
 - 7 initial protocols pared down to 3 remaining to compete
 - TDM (IAG)
 - ISO 18000-6 type B (Sego)
 - ISO 18000-6 type C
- Agencies can keep what they have for their home system
 - Either use multi-protocol reader or Pay by Plate for those transactions
- Over time agencies would transition to the new protocol

Questions

MOGENS HANSEN

EasyGo[®] – 10 years later

Mogens Hansen, CFO

IBTTA Prague, Interoperability from the Ground Up, Monday, 20 October 2014

Sund ≈ Bælt
Sund ≈ Bælt

Sund & Bælt Holding A/S, Denmark

- State owned company
- Annual report 2013:
 - Revenue EUR 590 million
 - EBIT EUR 230 million
 - Debt EUR 5.9 billion

How did it start

Experience from the set up phase

- It takes time – 3 years from decision to start of operations
- Technical challenges – practicable
- Common data interface / EasyGo HUB
- Agreements and procedures are a challenge

The set up of the solution

- Cooperation of TCs from Denmark, Norway and Sweden
- A Service for all vehicles
- One DSRC OBE – one contract – one invoice for toll collection in 3 countries
- OBE issued by local TSPs
- Available since March 2007
- Experience:
 - The decision to offer the service to all types of vehicles and therefore easy to communicate to customers has proved to be an excellent prerequisite for success
 - Customer service – Important to ensure adequate knowledge about the service
 - High quality

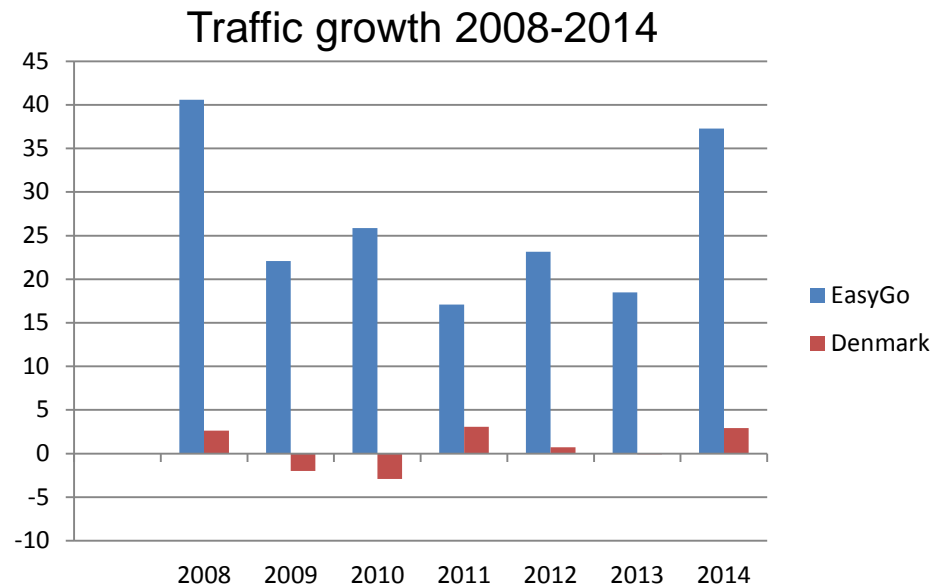

Development of the service

- New strategy – "Influence and adapt"
 - Protect investments
 - Prepare for EETS
- Contact to ASFINAG
 - EasyGo+
 - Upgrade of set up – to meet EETS requirements
 - Experience: It takes time
- Expand the service with new TCs:
 - More roads, bridges and tunnels
 - More ferry services
 - Parking facilities

Results obtained

- A service in demand
- Happy customers
- Efficient toll collection
- Low costs – small organisation

Next step

- Should EasyGo[®] continue to extend its services?
 - Certainly
 - Effective access for new TSPs to a HUB of TCs
 - We believe that a regional development will be the driving force of EETS
 - Create an interconnected region
 - Combine DSRC and GNSS
- In general:
 - We believe that the truck business will be the prime mover of EETS
 - The private car segment primarily requests regional solutions

Experience

From implementation:

- It takes time
- The technical solution is practicable
- Agreements and common procedures are a challenge
- Common data infrastructure – data exchange via EasyGo HUB

From operations:

- The service has been available to all types of vehicles – easy communication to the SU
- Customer service – Important to ensure adequate knowledge about the service
- Quality – the main challenge – is important to efficient operation and to ensure a good reputation
- Small and efficient organisation
- Gains in relation to efficient toll collection from customers that drive across borders
- Interoperable services are on demand

KEVIN O'SULLIVAN

Ireland National Interoperability Overview

Kevin O'Sullivan Arup

20th October 2014

At the outset there were two main reasons for promoting ETC interoperability

- Firstly, it was noted that that full interoperability would be of **significant benefit to road users** in general and in particular to regular and strategic users of the new motorway network;
- Secondly, the introduction of interoperability was viewed as a **'springboard' to deliver increasingly ambitious levels of Electronic Toll Collection (ETC) on the network;**
- It was also argued that from the road user's perspective interoperability should be considered a 'necessity';

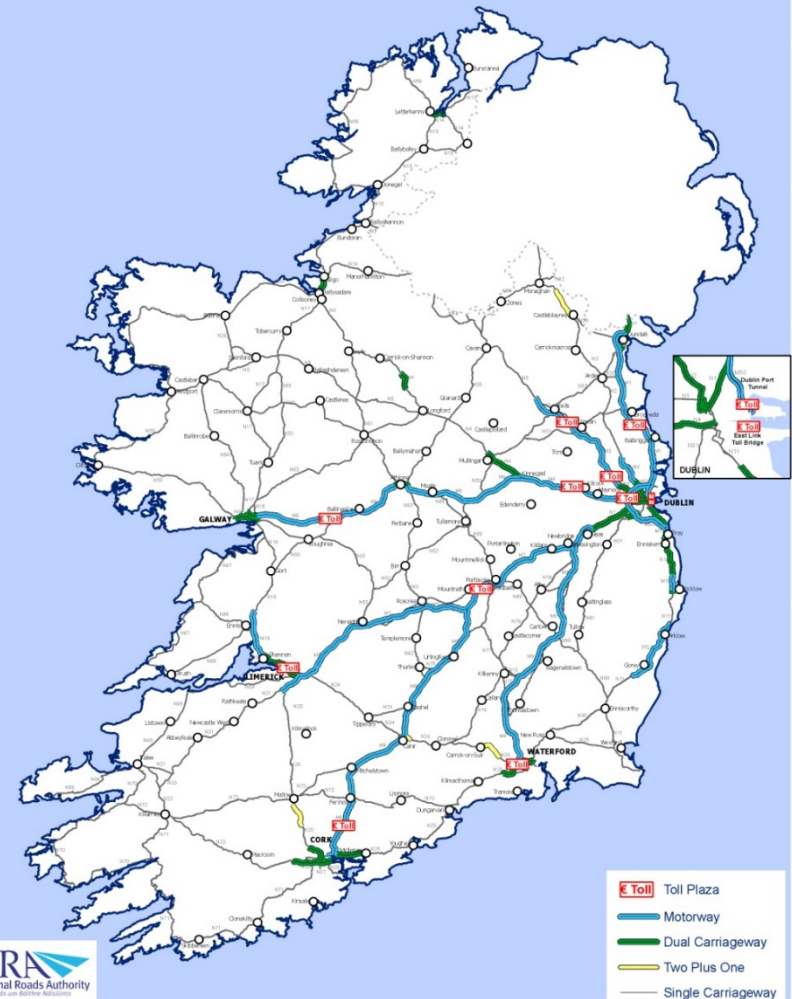

The current situation is influenced by many changes over the past decade

- 2003–2010 - New motorway network with toll roads;
- 2007 – Appointment of 1st Interoperability Management Service Provider;
- 2007 - Introduction of national ETC interoperability;
- 2008 - Introduction of ORT free flow on M50;
- 2008 - Introduction of National Toll Service Providers ;
- 2012 – Tender for 2nd Generation Interoperability Management Service Provider;
- 2014 - Implementation of 2nd Generation IMSP
- Ongoing – Preparation for European Interoperability;

Irish Network

- There are currently ten toll roads on the national network and one on the local network;
- The majority of the toll roads have been funded using Public Private Partnerships. Others Operator model
- Virtually all Ireland's commerce and industry depends on road links
- Roads carry 96% of passenger traffic and over 98% of internal freight
- Population increased 8% since 2006 to 4.6m;
- Car ownership ~ 2.5 million;

Toll Plaza Locations 2010

Irish Tolling System

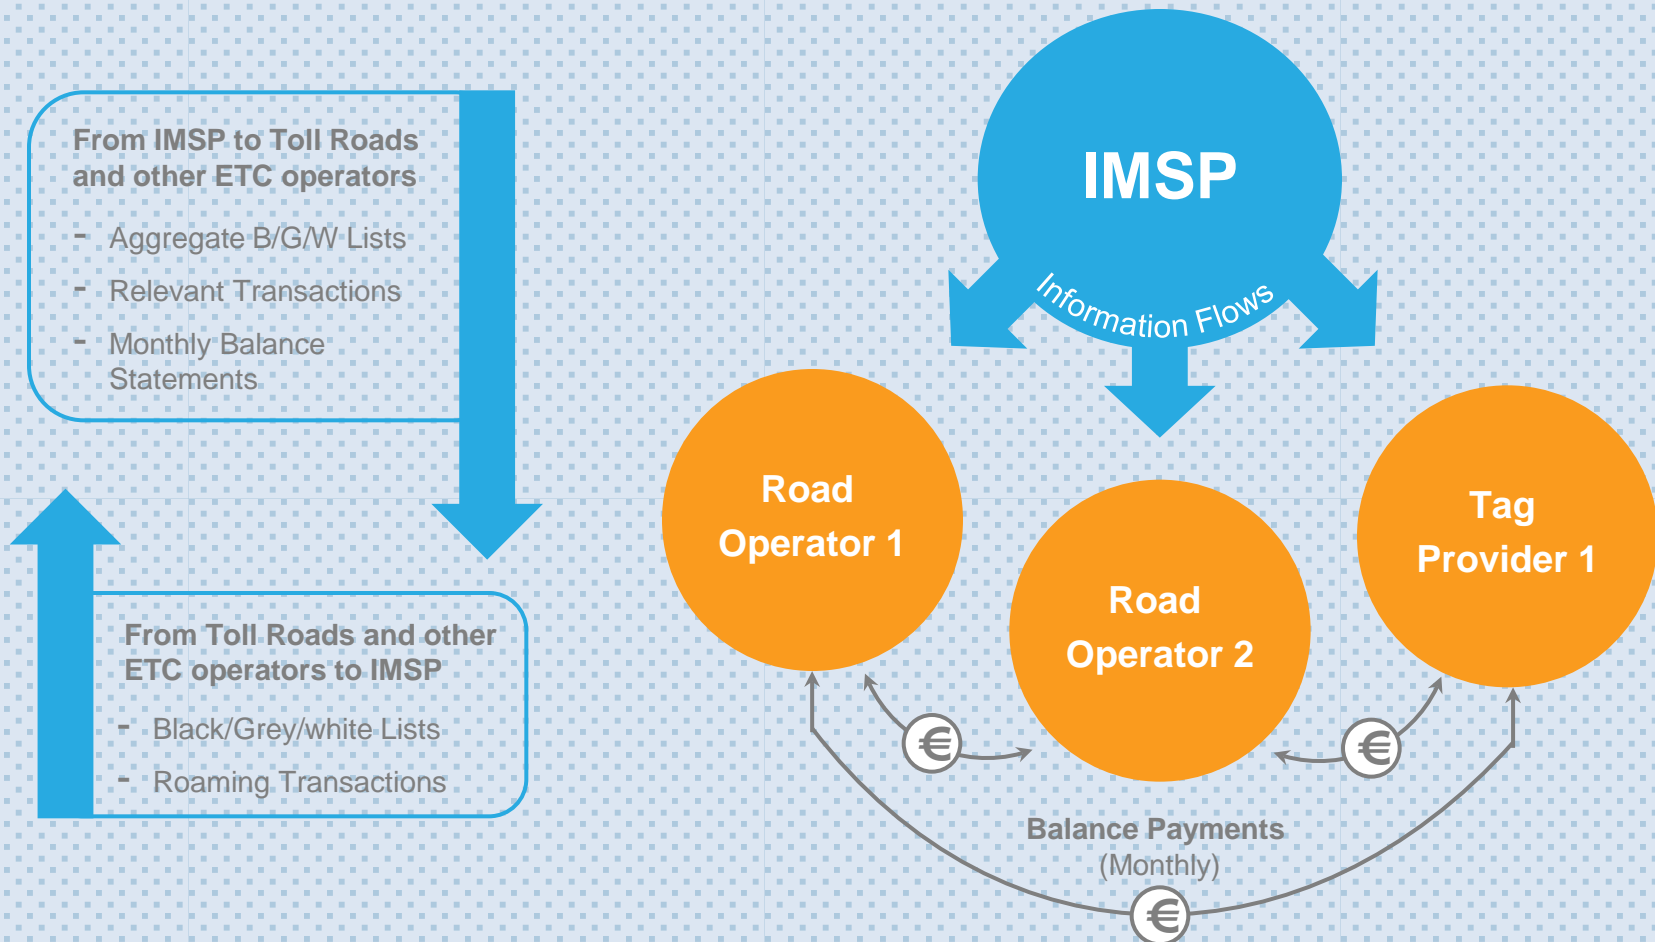

- Single-point tolling;
- Standard toll plazas;
- ETC options and express lanes.
- Open-road tolling;
- DSRC.

STAKEHOLDERS

Central Clearing House: “hub and spoke” solution to Interoperable ETC

Independent [Toll] Service Providers enter market

- Step-change in market
- Now ETC accounts for 50% of all tolling transactions
- IMSP processed €95M interoperable tolling transactions in 2013
- Cheaper toll collection for TCs
- Complex contractual arrangement
- Continuing obligation to be interoperable with each other
- Lack of security on revenue collected

The basic business case is positive for the tolling sector – due to operational savings

Annual National Estimates (2011)	€ millions
ETC Toll Revenue	€120
User Contribution (Admin Fees) – Revenue	€5
ETC Operating Costs*	- €15
Operating Cost Savings due to ETC (for Toll Road Network)	circa. €80

***Costs split between Road Users and Tolling Sector approx. 33% : 67%**

Funding Arrangements – who pays today?

- Network Manager (NRA):
 - Funds Interoperability Management Infrastructure and Systems (e.g. operating payments and capital for interoperability management service provide);
- Toll Road Companies:
 - Interoperability costs (e.g. systems and operations costs);
- Independent EETS Style Tag Providers:
 - System and Operational costs
 - Pay IMSP usage fees;
- Users / Motorists / Customers;
 - Account Administration Charge (next slide);

Charges to Users / Motorists are relatively low in current environment

- Current Policy on User Charges:
 - Administration Charge – to cover cost of supply of OBU and account management function. Some tag / service providers charge a fixed fee (e.g. €1 per month per OBU) and some charge a percentage fee (e.g. 5% of the toll charge);
 - No uplift in Toll charge for ETC – despite “better product” for road user;
 - Reduce Fees for ORT
 - No additional roaming charges to users for interoperability – unlike mobile phone model;

Developing the Model

- Lessons learnt – how can we improve?
- Flexibility and market-oriented approach
- Contractual model to allow companies assume greater autonomy and responsibility
- A technical solution to facilitate flexibility and improved performance
- Facilitate migration to new standards
- Provision for EETS?

New Technical Solution (IMSP)

- Selective interoperability
- Performance and reporting
- Bilateral agreements
- Retention of basic system of information exchange with enhancements
- Flexibility in standards employed
- Facilitation of EETS?

IMSP New Contractual Framework

- Market-oriented
 - No obligation to be interoperable
 - Commercial decision on the basis of open market forces
 - Commercial matters to be agreed bilaterally
- Base framework of information exchange for consistency
- Future-oriented:
 - Open with respect to standards
 - Facilitation of expansion and growth of interoperability market
 - Facilitation of European interoperability

IMSP

■ Transactions Per Month By Toll Changer

■ Transactions Per Month By Toll Service Provider

Thank You

Kevin O'Sullivan

Arup

kevin-n.osullivan@arup.com

KEZIBAN GIRISIT

The French Interoperability

Keziban Girisit

Axxès – ETC service provider

Member of AETIS and REETS Project

The French Tolls

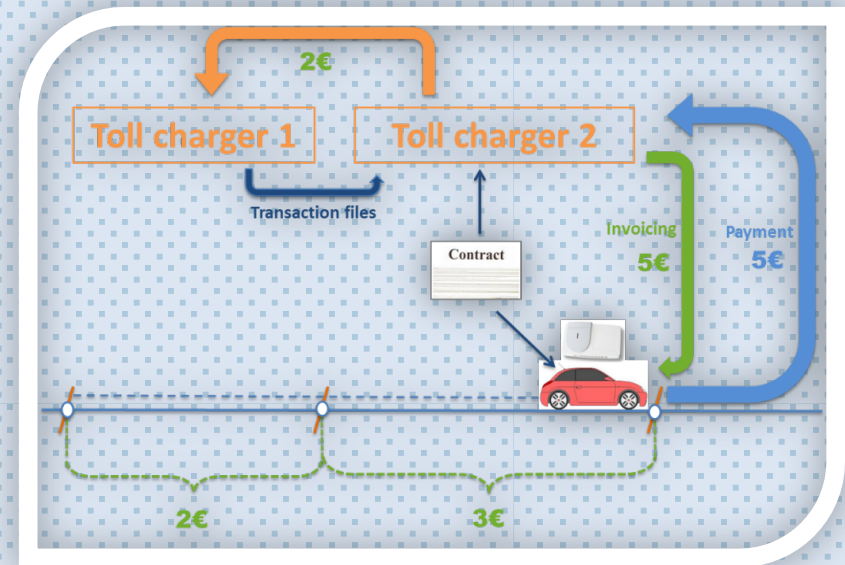

- 9 048km of conceded network
- 19 concession companies
- Annual transactions in million:
1248,4 for LV - 162,2 for HGV
- Revenues in million of euros:
5 856,5 for LV and 2 683,1 for HGV

Interoperability for LV with Liber-T

2000 - launch of the interoperable transponders on the national network

- One contract between the TC and client
- Transactions cleared between TCs
 - 5 million subscribers
 - 530 million transactions
 - 213 transactions per OBE/year
 - 42% of LV transactions are ETC ones

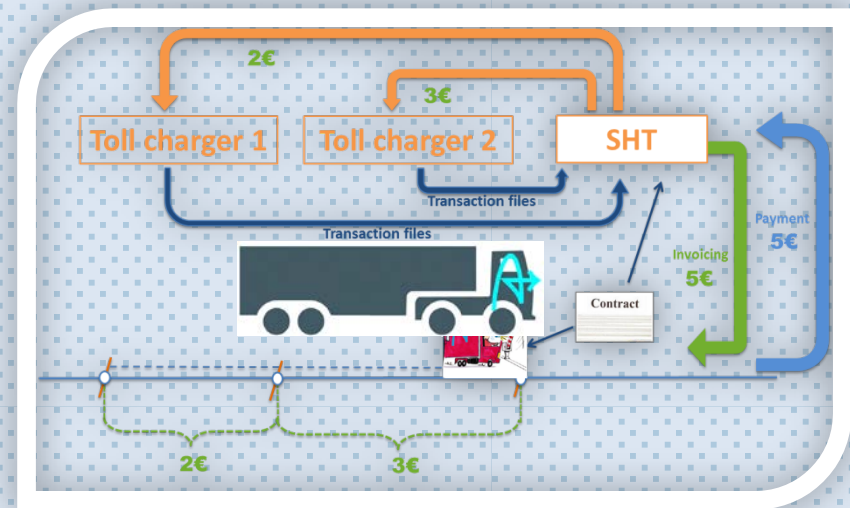

TIS-Liber-t

Interoperability for HGV with TIS PL

2005 – Introduction of a new actor ‘SHT’ for management of HGVs transactions

- Contract between the SHT and client
- The SHT clears the transactions for the TCs
 - 640 000 subscribers
 - 140 million transactions
 - 240 transactions per OBE/year
 - 85% of HGVs transactions are ETC ones
 - Benefit of specific discounts
 - Access to new services for fleet management

Data and information provided by

The HGV tax on national roads

2009 – French State decision to implement an ETC on national roads

- The SHT keeps the contract with the client and manages the ETC on behalf of the PPP.
- The PPP manages the tolls system and tax collect on behalf of the French State

A new OBE is deployed with DSRC system for enforcement needs and GNSS system to transmit the charging points crossed by the HGVs

* Les PL français doivent être équipés en permanence,
Pour les PL étrangers, seulement quand ils circulent sur un réseau taxable.

* French HGVs must be permanently equipped with an OBE,
while foreign vehicles only need to be equipped when driving on the taxable network.

On October 9th, launch postponed sine die

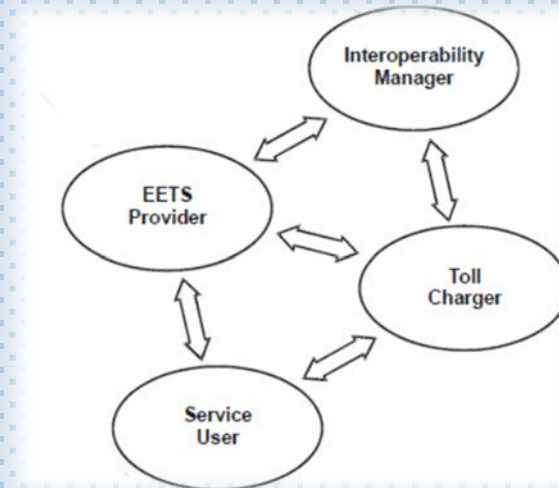

The successful experience of Axxès

2005 – Foundation of Axxès for the European Electronic Toll Collection

Leader of Electronic HGV Toll in France

- 250 000 interoperable devices in circulation
- 125 000 of them are GPS units
- 30 000 clients
- 50 European Partners
- 2 workshops for OBE personalization and shipment

Develop the interoperability across Europe.

- > Our reason for being

Offer an innovative product in the era of time

- > Facilitate the road for drivers and operators

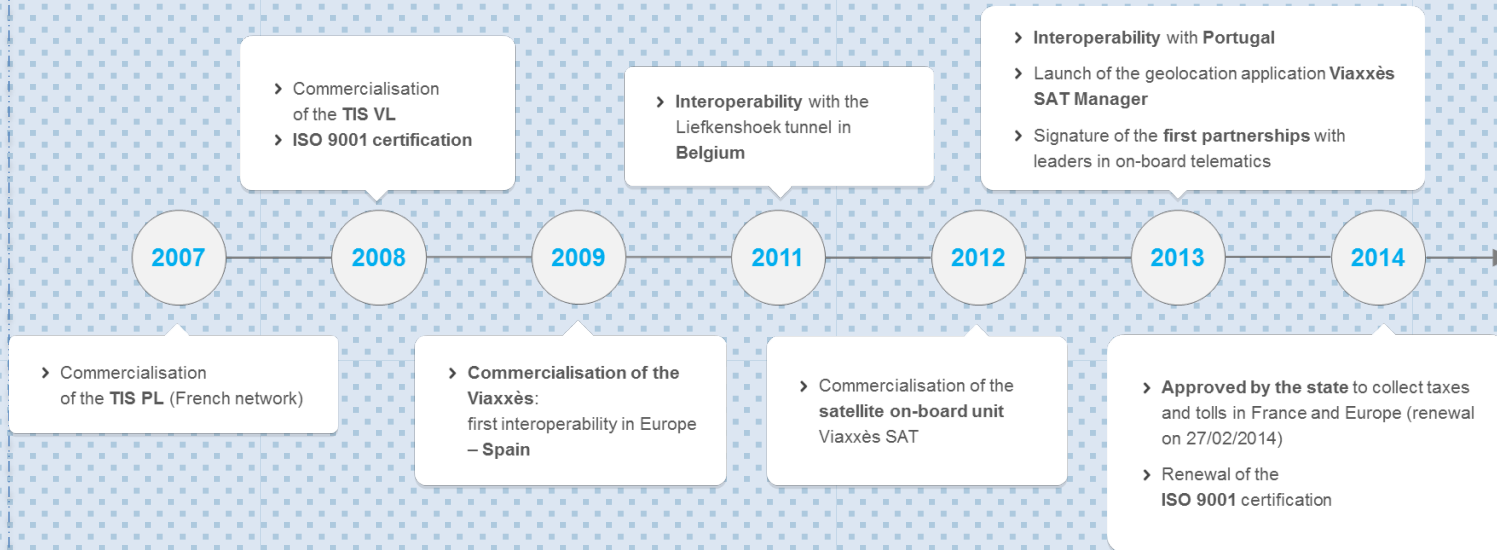

Offer new services

- > Improve and simplify the daily management

The successful experience of Axxès

Since 2007 – Innovative products and value added services linked to the DSRC and GNSS systems

Interoperability : a win win business

It's a need, it's useful and it's a real business

Improving traffic flow and reducing congestion

Increasing customer satisfaction and loyalty

Developping activities and **growing** revenues

Implementing a dynamic and global platform

The French Interoperability

Thank you for your attention
