

# DATA BREACH IMPACT REDUCTION

**Presented by Rush Taggart**

Chief Security Officer, CardConnect

**September 13, 2016**

# Who is CardConnect?

- > Largest First Data ISO
- > Merchant Acquirer with a Gateway
- > Security Solutions (Tokens, P2PE)
- > Recently public, symbol CCN
- > 200 Employees in Pennsylvania

---

# Impacts of a Breach

- > How many cards were compromised
- > Forensics efforts to determine how
- > Notifications to card brands, all stakeholders
- > Inevitable second guessing, how did this happen?
- > Management completely distracted, responding to inquiries, investigations, one to two years
- > Reputation and business partner impacts
- > Brand fines \$200+ per account
- > Legal and investigative expenses enormous
- > And more

---

# Four Suggestions

- > Delete what you don't need
- > Archive what you might
- > Segment your network
- > Sanitize sensitive data with Tokens

# Delete data you don't need

Do your databases look like this?  
Years or decades of Toll records?

**That's a lot of data...**

We all like to save our data!  
Just because we can.

---

# Archive what you might need

- > Archive what you really need, delete what you don't
- > Don't keep it online just because you might need it
- > Create an archive server that only two staff members have access to
- > Move data that is no longer required for day-to-day business

# Segment your Network

- > Isolate your data physically, behind internal firewalls
- > Think critically about which functional areas have access
- > Restrict network access to the barest possible
- > Favorite rule: **deny outbound...ANY!**

# Sanitize sensitive data with Tokens

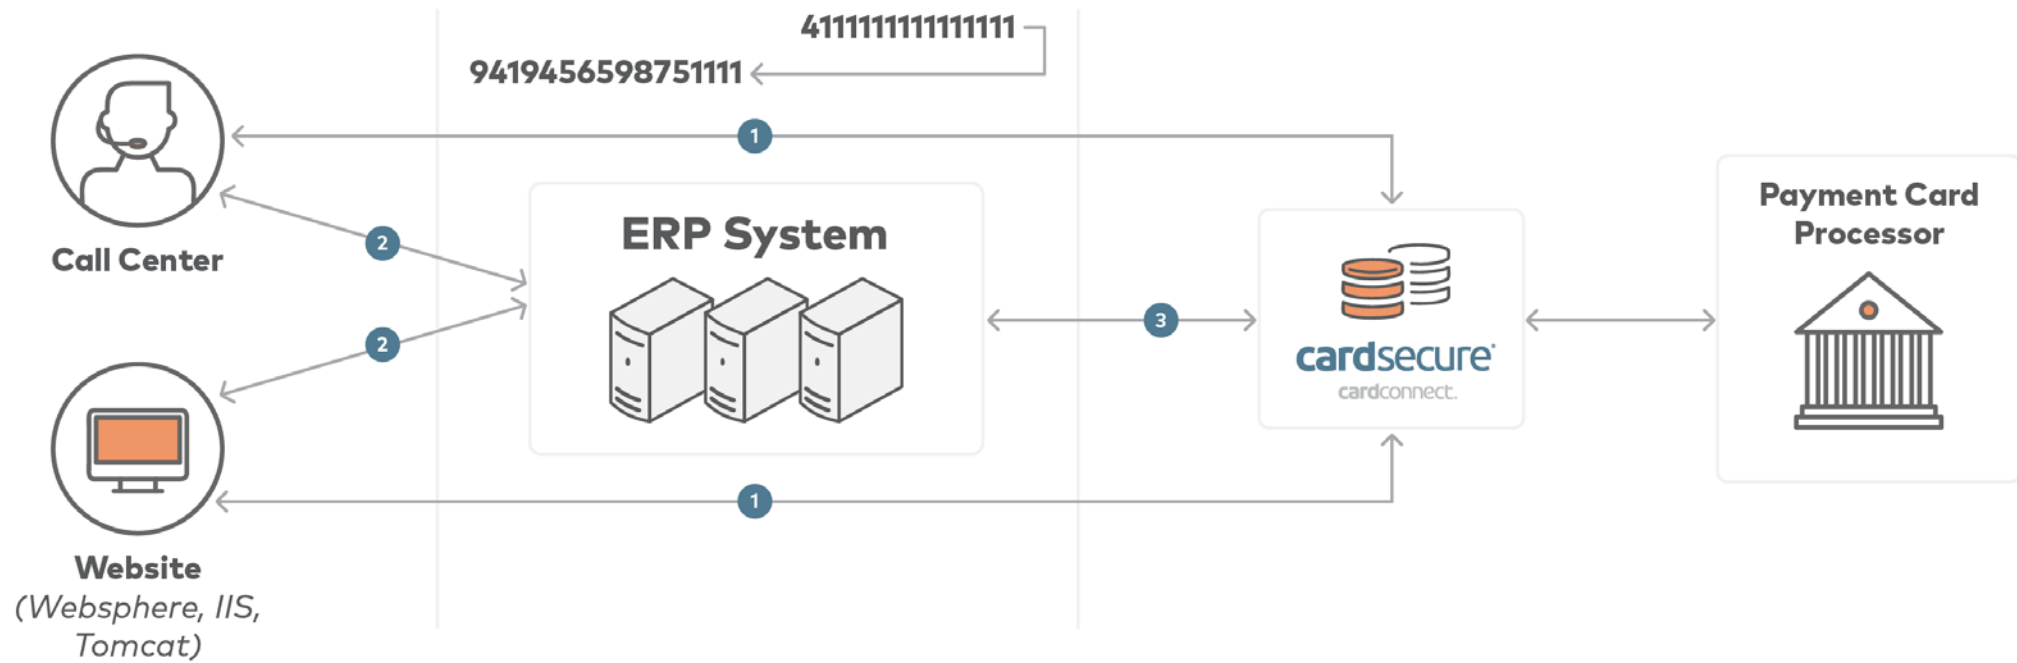

> For sensitive information you need to keep around, protect it with **tokens**

> **Think about this....**in the 1950s, the NYC Transit Authority instituted the subway token to replace actual money – this provided an additional layer of security (*tokens have no monetary value outside of subway rides!*)

> Payment tokens convert **41111111111111111111** to **9419456598751111** for your databases

# Token Process Flow

THANK YOU
